BMO[®] Return Enhancing GIC

Hypothetical Results

This chart illustrates hypothetical returns for the BMO Return Enhancing GIC. The vertical axis represents ranges of hypothetical 2-year returns for the GIC expressed as a percentage and the horizontal axis represents the frequency, or how often, the GIC hypothetically would have generated a return in a particular range. The calculations assume that: the Reference Portfolio is the same as the Reference Portfolio for the Series currently available for sale; the rates used to calculate the returns are the same as the rates for the Series currently available for sale; the GICs are issued monthly during the date range indicated; the issue date is the last business day of the issue month; and the calculation dates for each Series occur on the 1- and 2-year anniversary dates of the issue date. *Please note that past market performance is not an indicator of future market performance.*

GICs issued between August 2006 and March 2010 and Maturing between August 2008 and March 2012

BMO Return Enhancing GICs are issued by Bank of Montreal Mortgage Corporation and guaranteed by Bank of Montreal. The principal amount of a BMO Return Enhancing GIC is guaranteed and is repayable upon maturity and, in addition, the GIC provides a minimum guaranteed rate of return, but there is no guarantee you will receive any additional return based on the performance of the underlying securities. The rate of return for the term payable is the Guaranteed Rate of Return for the Term plus the variable rate(s) of return on the Reference Portfolio, if any, but will not be less than the Guaranteed Rate of Return for the Term. The rate of return for the term is determined without reference to any dividends or distributions paid on the securities. Each variable rate of return is the average of the effective returns on each security in the Reference Portfolio on the applicable calculation date (the "Average Effective Return"). The effective return of each security is based on the actual return of the security calculated as a percentage increase or decrease in the price of the security (the "price returns") from the second business day after the issue date to the applicable calculation date. The effective return of each security used to calculate the Average Effective Return on a calculation date is determined as follows: if a price return is positive, the effective return is the maximum return for each security as set out in the Terms and Conditions for the GIC; if the price return is equal to or greater than the minimum floor return, as set out in the Terms and Conditions for the GIC, but less than or equal to zero, the effective return is the price return; and if the price return is less than the minimum floor return, the effective return is the minimum floor return. If market disruptions or other special circumstances affect the calculation of the return, the calculation agent may adjust or delay the calculation or payment of interest, estimate the value of a security in the Reference Portfolio, replace a security and/or determine the amount of interest, if any, that may be payable in an alternate manner. The Terms and Conditions for BMO Return Enhancing GICs are available at your local BMO Bank of Montreal branch. BMO Return Enhancing GICs are not available in an RSP if the GIC's maturity date is after the date you are required to convert your RSP to a RIF.
