The suite of BMO MSCI Income Leaders ETFs provides an innovative approach to income investing. Our ETFs are built combining two factors, quality and yield strategies. With this range of ETFs, investors benefit from sustainable returns and capital growth opportunities in a risk-controlled framework. Offering regional building blocks and a combination of hedged and unhedged ETFs, investors and asset allocators have access to a broad range of tools to meet their income and growth requirements.

Investing for Income

Income generating investments are in great demand and equity dividends are an excellent source to generate income.

However, dividend strategies alone can incorporate yield traps. This can be mitigated by introducing additional portfolio construction features, such as explicit quality screening preceding a filter seeking high dividend stocks.

Applying such quality filters can also have additional benefits, such as reducing portfolio volatility, enhancing the risk adjusted returns and capturing market growth.

Quality as a 'Factor'

Quality investing is a relatively new concept as a factor when compared to more established factor strategies such as value, size, yield, momentum and low volatility. Quality investing has demonstrated long-term outperformance against the market.

Quality strategies are often constructed selecting stocks providing high profitability, earnings persistency and low debt levels. Generally, quality stocks are better supported through market cycles¹ offering risk adjusted, longer-term capital growth potential.

BMO Income Leaders ETFs go beyond traditional income. They focus on sustainable quality income.

Universe	Parent Index (excluding REITs) MSCI USA Index MSCI United Kingdom Index MSCI Europe ex-UK Index MSCI Emerging Markets Index
Quality Return on Equity (ROE) Financial Leverage Earnings Growth	Quality screen – top 50% of securities with the highest quality scores Avoids yield traps by
Dividend Yield	Dividend yield screen – top 50% of securities by dividend yield from previous screen Quality.
Issuer Cap	Individual securities are capped at 5%
MSCI Select Quality Yield Indices	The BMO Income Leaders ETFs track the MSCI Select Quality Yield Indices Combining factor strategies to deliver sustainable and favourable risk adjusted returns.

Blending Quality and Income

Quality and income investing are complementary factors, and provide investors with sustainable income and growth over the long term. We focus on quality first, to identify market leaders and those companies delivering sustainable income over time. We aim to screen out companies with poor fundamentals, which helps avoid yield traps.

Income • Stable cash flow • Lower volatility Sustainable income & growth growth • Market leaders • Strong balance sheets

Partnering with MSCI

We have partnered with MSCI, a global leader of both traditional market capitalisation and smart beta indices, to create the MSCI Select Quality Yield indices. These vehicles are designed to represent the performance of companies that have relatively high scores and with higher dividends within the parent index universe of securities.

The BMO Income Leaders suite of ETFs provide multiple building blocks to help investors achieve income generation across regions. Adding currency-hedged and unhedged vehicles, investors can also make an active decision on their currency exposure.

¹ MSCI, Flight to Quality, Understanding Factor Investing, September 2015.

Advanced Screening

The MSCI Select Quality Yield Indices are constructed blending two different factors; quality and dividend yield, employing a transparent rules-based methodology. All securities belonging to the parent MSCI index are eligible for inclusion with the exemption of REITs². The security selection is a two-step process:

1) Screening for quality

The quality score is calculated combining three fundamental variables to define the financial aspect of quality: Return on Equity (ROE), earnings variability and financial leverage to the parent index constituents. The top 50% securities by descended quality score are selected.

2) Screening for dividend yield

In a second step, all the previously selected companies are ranked again in descending order of their dividend yield, and the top 50% stocks are selected for inclusion in the index.

Selected securities in the index are first free float-adjusted market capitalisation weighted. Each security in the index is capped at 5% to ensure a well-diversified portfolio. The index is rebalanced on a semi-annual basis, coinciding with May and November Semi-Annual Index Review (SAIR) of the MSCI Global Investable Market Indices. To reduce index turnover and enhance index stability, a security buffer of 20% is applied during the ongoing index reviews.

The BMO Income Leaders ETFs provide exposure to the MSCI Select Quality Yield Indices. The ETFs fully replicate the underlying basket of constituents.

Currency hedging

The MSCI Select Quality Yield indices are calculated in their base currency (i.e. USD, EUR or GBP). A subset of ETFs are offered hedged to Sterling.

To hedge the currency risk of the Index, each foreign currency in the index is hedged back to a home currency (i.e. GBP) by notionally 'selling' each currency forward at the one-month forward rate at the end of each month.

Glossary:

REITS – A Real Estate Investment Trust, or REIT, is a company that owns, and in most cases, operates income producing real estate assets. Some REITs provide loans to the owners and operators of real estate. To qualify as a REIT under the Internal Revenue Code, a REIT is required to distribute at least 90% of its taxable income to shareholders annually and receive at least 75% of that income from rents, mortgages, and sales of property.

Mortgage REITS – A Mortgage REIT provides loans to owners and operators of real estate assets or holds or trades mortgage backed securities. Mortgage REITs earn interest income and are subject to credit risk (that is, the chance that a loan will not be repaid).

Source: MSCI

^{**} Annualized one-way index turnover for the period 31st December 1998 to 30th December 2016.

^{***} Monthly averages for the period 31st December 1998 to 30th December 2016.

² Real Estate Investment Trusts (REITs) have structurally very high dividend yield and, if included, would represent a very significant portion of the index. MSCI's newly introduced GICS (Global Industry Classification Standard) sector classification effective September 1st 2016, has elevated Real Estate from an industry group under the Financials GISC sector, to a sector of its own. BMO's Income Leaders underlying MSCI Select Quality Yield indices reflect these changes. As a result, Mortgage REITs will be eligible for inclusion in the investable universe under the Financials sector, while REITS will remain excluded. For more information visit www.msci.com.

For professional investors only.

F&C Management Limited is the investment manager of BMO UCITS ETF ICAV which is authorised by the Central Bank of Ireland as a UCITS.

BMO ETFs are registered for distribution in Germany, Italy (for professional investors only), UK, Netherlands and Spain.

Shares are listed on the London Stock Exchange and may be purchased and sold on the exchange through a broker-dealer. Purchasing and selling shares may result in brokerage commissions. Applications for subscriptions directly to the funds may only be made by authorised participants.

Shares purchased on the secondary market cannot usually be sold directly back to the Fund. Secondary market investors must buy and sell ETF Shares with the assistance of an intermediary (e.g. a stockbroker) and may incur fees for doing so. In addition, investors may pay more than the current Net Asset Value per Share when buying ETF Shares and may receive less than the current Net Asset Value per Share when selling them.

Commissions, fees, costs and expenses all may be associated with investments in exchange traded funds. Please read the prospectus and key investor information document (KIID) before investing. Investment objectives, risk information, fees and expenses and other important information about the funds can be found in the prospectus. Exchange traded funds are not quaranteed, their values change frequently and past performance may not be repeated.
