Project Description	CAR1459 is the first project both Listed and Registered under the Soil Enrichment Protocol. The project promotes a range of agricultural management practice changes targeted at increasing soil organic carbon (SOC) storage and reducing net emissions of CO2, CH4, and N2O from farms throughout the continental U.S. Indigo Ag and our partners help farmers to implement climate-smart practices through an integrated system of extension and outreach, modeling, agronomic support, and digital data collection tools. Practice changes target fertilizer use, tillage, crop rotations, cover cropping, and livestock management. Beyond climate benefits, the project will increase farm resilience to weather and climate change, promote diversity of the soil microbiome, and increase rural incomes. This is an aggregated project, with new growers and fields added on a continuous basis. As of 2024 the project includes hundreds of growers managing tens of thousands of fields, covering millions of acres.
