Project Description	Located just outside of Sault Ste. Marie, Ontario, the Finite Carbon - Batchawana Bay IFM project covers 53,294 acres of sustainably managed forestland. The IFM project incorporates periods of deferred harvesting, timber stand improvement, and retention of snags, bolstering the health and value of the forest while also increasing carbon stored. Additionally, forest management activities within the project will meet or exceed Ontario best management practices for protecting water quality - including increased forest cover in riparian areas and upland forests adjacent to riparian areas to moderate stream temperatures and mitigate flooding impacts.
