Developing your business plan

• Building a business plan
• Stating your goals
• Plan for the future
Developing your business plan

The situation
You intend to start up a business, or perhaps it’s already operating. More than likely, you are seeking capital — a loan — to get your venture going or growing. However, before your loan request can be considered, you have to provide a business plan.

The solution
At BMO Bank of Montreal®, we are committed to helping Canadian businesses develop and succeed. This Business Coach brochure can help you to develop a well-thought-out plan.
While a business plan can help you get the financing you need, it can also help your business succeed over the long term. With a sound business plan, you’ll have solid goals to aim for, a strategy for reaching them and a useful understanding of the environment in which your business is operating. A business plan doesn’t have to be complicated or time consuming. It simply requires you to consider the factors that will affect your business and allows you to plan to deal with them. You should also realize your plan isn’t written in stone: expect the unexpected and change your plan when necessary.

**In this Business Coach, we have included:**
- steps to help develop your business plan
- a sample Statement of Goals
- a sample Business Planner
- tips to help you keep your business plan on track

Since every business is different, the samples are offered only as examples on which to base your individual goals and business plan.

**Setting your business goals**

Before developing a realistic business plan, you need achievable goals. The information necessary to set your goals will come from both internal and external sources.

**The components of your business:**

**What’s involved?**
- business objectives/strategies
- employees
- sales
- customers
- cash flow

**Who are your competitors?**

**What will your business offer that is unique or better than the competition?**
- products
- price
- delivery
- service
- quality
- warranty
- contracts

**What is the size of your potential market?**
- Is the market growing?
- What are the major factors influencing it?
- What is the expected life cycle (of products or market)?
- Who are your current and future customers?

**Statement of goals**

**Personal goals**

**Long term**
- The value of my holdings in the company should be approaching $1.5 million within five years.
- By the time my children are in university, I want time and money to travel — therefore, I must be able to cash in some or all of my holdings.
- Give some thought to what I want to happen to my business when I retire. (Unfortunately, most business owners wait until they are ready to retire before giving serious thought to succession planning.)

**Short term**
- I will go on an annual two-week family holiday.
- If something happens to me, my spouse must have financial security.
- By the end of next year, I want the same salary I would have to pay a manager to run the company (or the after-tax equivalent in dividends).

**Business goals**

**Short and long term**
- Profit before taxes should be no less than $450,000 within five years (I own 80%, the employees 20%; at four times pre-tax profit, my share would be worth 80% of $450,000 X 4 = $1.44 million).

**Check for “hot buttons”**
- back orders
- warranty claims
- staff turnover
- customer complaints

Review your business plan with your accountant or with an associate whose business insight you respect.
Developing your business plan

- Despite increasing labour costs, I will not let my gross profit fall below 33%. If necessary, I will subcontract the lower-gross items or drop them.
- The company will increase inventory turnover from 3.2 times to 4 or 5 times within five years by a better inventory control system with increasing sales.
- I will aim for pre-tax profit on sales above the industry average of 17%.
- We will reduce our dependence on product X from 40% of total sales to less than 25% within three years. (This will be achieved by the launch of two new products).
- I will groom a new general manager to be able to take over from me within five to seven years, while I still maintain overall ownership.

These goals provide the foundation for the completed sample Business Planner outlined in the next section.

Communicate any changes of plan with key employees. Also, get them involved in developing your business plans. This will give them a better understanding of the business and help keep them committed.

Planning to reach your goals

With your goals set and stated specifically in terms of sales, profit, expenses and so on, you will need to decide when you want to reach these goals. Recognize you cannot do everything at once. Develop a five-year plan with priorities and detailed goals for year one and what you want to achieve in subsequent years.

Planning for one year and five years

This Business Coach includes a sample Business Planner that you can download from bmo.com/main/business/news#tools. It has been completed to reflect the outlook of a “typical” company. While your business concerns may differ from the entries you see in the example, the Business Planner can be a useful template. It features two main sections.

In the first section, you can forecast sales, expenses and profits by month for one year and by year for the next four years.

In the second section, you can list major activities that need to be addressed or goals you want to accomplish under:
- marketing
- sales
- new products or services
- production
- development
- human resources
- finance

This owner wants his 80% of the company to be worth $1.5 million in five years, so he has to work to the level of profits that will help achieve that. He sets a future value, probably with the help of his accountant. Your own objectives might be more modest or more ambitious depending on the size and type of your business. Always date your plans. They will change from time to time.
## Business planner – 1-5 years (in thousands of dollars)

**Date Prepared: Nov 15**
